

The Sagrada Familia is Gaudí's masterpiece, the greatest example of modernist architecture and one of the most visited monuments in Spain.

Both, the Crypt and the Nativity Façade of the Sagrada Familia were declared World Heritage by UNESCO.

Between 2007 and 2009 the Crypt was restored and the company Rehabilit participated as a specialist in advanced techniques for the rehabilitation of historical buildings.

In 2008 we entrusted the company Rehabilit (Humicontrol partner in Catalonia) with the treatment of the rising damp problems that affected the Crypt of the Sagrada Familia.

5 wireless electro-osmosis MURSEC ECO devices were installed in order to cover the entire surface of the Crypt.

From the beginning, we were able to observe the positive effect of the decrease in humidity, and after 14 years, we can verify the effectiveness of the Humicontrol wireless system.
